Video premade cables	9
Data premade cables	17
Audio premade cables	25
Adapters	41

This catalogue is made with care and attention for details and is as complete as possible on publication date. Due to the fact our products, documentation and products range are continuously improved and expanded, updates may have occurred since publication date.

To be always up to date with the latest improvements and additions or to obtain additional product information, please visit the product page on our website procab.be

PROCAB CLASSIC SERIES CATALOG

The Classic premade series from PROCAB offers a stunning line of cables and adapters that will satisfy any AV integrator. Not only the design but also the quality of the cables themselves is unheard of in its price range. The advantage of gold plated contacts and the connectors that are molded firmly on the cable make this the ideal solution for fixed installations and mobile use in any audio, video or data project.

CLASSIC SHRINK SLEEVE

A lot of Classic cables are equipped with a shrink sleeve. These shrink sleeves are meant to protect a company logo or a **cable tag**. These sleeves are factory installed for the purpose of placing a cable tag without the need to detach the connector. The **heat shrink** tubing can be easily shrunk by means of a heat gun. The sleeves are not lined with glue and have a **length of 60mm**.

LSHF

LSHF stands for Low Smoke, Halogen Free. This term refers to Halogen free flame retardant thermoplastic material used as a sheathing compound in cables. In the event of a fire or when exposed to high levels of heat, the chemicals in the jacket remove heat from the flame, whilst the reaction produces water as a by-product to help quench the flame. As a result, the cable will emit very low levels of smoke and non-toxic levels of poisonous halogen gases.

CLASSIC'S REACH

The Classic series cables and connectors are made for a wide range of applications and excel in their use. It offers a solution for audio, video broadcast, light control or network connectivity that you can rely on.

OXYGEN FREE COPPER

All copper conductors that are used in the Classic series cables are 99.99% oxygen free copper that enhance conductivity which improves the audio transmission.

CLASSIC ENTITY

Firmly molded connectors from the fundamentals of the Classic series. These two color, one robust and one flexible rubber part connectors are clearly recognizable. This design is extended throughout the entire Classic series.

FLEXIBILITY

Even though the Classic series is mostly used for fixed installations, they excel in their flexibility and build quality. This makes them also an excellent partner for mobile use.

GOLD PLATED

The complete line of connectors in the Classic series are fitted with gold plated contacts that prevent oxidation and maintain performance after years of use.

Video cables

CLASSIC SERIES VIDEO CABLES

The PROCAB Classic series offers video connection cables meeting the highest requirements for current state-of-the-art video applications, including connection cables for both analog and digital video transmission. For every application where a video source device such as an HD-camera, media-server or Blu-ray player needs to be connected to a video display device such as a monitor, beamer or flatscreen TV, PROCAB offers the best suited connection solution.

HDMI

HDMI (High-Definition Multimedia Interface) is an audio/video interface for transferring uncompressed video data and compressed or uncompressed digital audio data from an HDMI-compliant source device to a compatible monitor, video projector or digital television. With the PROCAB HDMI cables you can easily transmit an HD video signal up to 20 meters and even 4K Ultra HD up to 15 meters.

4K

4K is also known as UHD (Ultra-High Definition). This is an overarching term that also encompasses several resolution sizes which offer more pixels than regular HDTV. 4K uses at least 4 times more pixels than the regular 1080 pixel HD resolutions thus the name 4K. The ultimate result of this increased pixel breakdown is an image clarity that goes well beyond conventional 1080 pixel HD resolution and presents more vibrant, varied and realistic colors as well as much higher frame rates.

CLV100

- › Audio return channel
- › HDMI with Ethernet
- › Triple shielding
- › Standard speed up to 1080i
- › High speed up to 1080p

DESCRIPTION

HDMI A male to HDMI A male

High speed HDMI with Ethernet Channel

Data cables

CLASSIC SERIES DATA CABLES

In order to achieve a digital signal transmission between several devices, communication should be made according to standards. Several standards are defined, each especially designed for use with specific applications. The two most important standards for professional stage and broadcast use in the field of audio and video are the AES/EBU and the DMX standards.

AES/EBU standard

The AES/EBU standard is a standard which is designed to carry digital audio signals between devices, developed by the Audio Engineering Society and European Broadcasting Unit. There are three different kinds of mediums that can be used for transferring digital audio signals according to the AES/EBU standard:

Balanced
3 conductor

110 Ohm twisted pair cabling with an XLR connector. (This kind of cables is available in both Reference and Classic series)

Unbalanced
2 conductor

75 Ohm coaxial cable with an RCA connector. It uses the same patching, cabling and infrastructure as analog and digital video interconnections. A BNC variant also exists. (This kind of cables is available in both Reference and Classic series)

Optical

Optical fiber, usually plastic but occasionally glass, with an F05 connector, also known as TOSLINK or S/PDIF. (This kind of cables is available in both Reference and Classic series)

Digital Multiplexed (DMX) standard

Digital Multiplexed (DMX) is a serial communication protocol which is based on RS-485 and is commonly used to control stage lighting and effects. It was originally intended as a standardized method for controlling light dimmers, but, through further developments it became the major way to control special effects, moving effects and many more devices in the field of on- stage and entertainment technologies.

CLD400

DESCRIPTION

Midi male to
Midi male

Code	Length
CLD400/0.5	0.5 m

The Prime premade series from PROCAB offers you the highest class in cables. This series is specifically designed to withstand the harshest use and abuse that any rental and road application can throw at them. All connections are equipped with the highest quality connectors. Equipped with reliable Neutrik and PROCAB plugs, it ensures the most trustworthy communication. Besides the top-quality black connectors, the cables used in this series are designed to meet the highest standards. With the Highflex™, Ultraflex™ and Duraflex™ technologies implemented in the cables it provides you the right flexibility and solid feel when you need it most.

The Classic premade series from PROCAB offers a stunning line of cables and adapters that will satisfy any AV integrator. Not only the design but also the quality of the cables themselves is unheard of in its price range. The advantage of gold plated contacts and the connectors that are molded firmly on the cable make this the ideal solution for fixed installations and mobile use.

The BASIC premade cable series from PROCAB consists of a complete line of audio, video and data cables that you will need in your installations. These reasonably priced cables can be used for fixed installations as well as mobile applications. The connectors used in this range consist out of a combination of molded and solder connections. Combined with the flexibility of the cables themselves, makes this series ideal to fit in a very wide range of applications.
